

Overall view of property.

Existing stone masonry walls and concrete column cages to be incorporated into new foundation design for church and school buildings.

Garrett Mills visits Haiti with eMI

Discussing design elements with my team members of what is possible in Haiti. Observing existing construction was key to learning what is possible.

eMi team members along with myself and Doctor Robert. Dr. Robert was happy to have his building green tagged so that patients could re-enter with confidence.

Scale model of the building campus. This model was left with our client at the end of our trip.

Post-earthquake evaluation of medical clinic building. Very minor cracking at wall corners.

Our client, Denis, and myself after our final presentation.
